Makeup Application Tips and Techniques

Foundation Matching

Finding the right foundation shade is crucial for a natural, seamless look. Test foundation on your jawline in natural light, not the back of your hand. The correct shade should disappear into your skin when blended. GlowMart offers liquid matte foundation (best for oily skin), dewy skin tint (sheer coverage for a natural glow), full coverage foundation (conceals acne and scarring), and BB cream (light coverage with skincare benefits). Consider your undertone: warm undertones look best in yellow or golden bases, cool undertones suit pink or red bases, and neutral undertones can wear either. Our associates offer complimentary shade matching at any Flagship or Standard store using digital color-matching technology.

Primer Application and Selection

Primer creates a smooth base, fills pores and fine lines, and extends makeup wear time by up to 8 additional hours. Apply after moisturizer and sunscreen have absorbed, but before foundation. Use a pea-sized amount and press into skin. Choose your primer based on your concern: Pore Minimizing Primer (silicone-based, best for oily skin), Illuminating Primer (pearl-based, best for dull skin), Mattifying Primer (clay-based, best for oily skin), Hydrating Primer (hyaluronic acid-based, best for dry skin). Color-correcting primers: green neutralizes redness, lavender brightens sallow skin, peach cancels dark circles on deeper skin tones.

Concealer Techniques

Concealer is one of the most versatile products. For under-eye circles, choose a concealer one shade lighter than your foundation with a liquid, hydrating formula. Apply in an inverted triangle shape and blend with a damp beauty sponge. For blemishes, use full-coverage concealer in your exact skin tone and dab directly onto the spot. For brightening, apply a luminous concealer to the bridge of the nose, center of the forehead, and chin. For contouring, use a shade 2 tones darker along the hollows of the cheeks, jawline, and sides of the nose. Set concealer with translucent powder to prevent creasing.

Eye Makeup Basics

Start with an eyeshadow primer on clean, dry lids to prevent creasing. Apply a base shade across the entire lid, a medium transition shade in the crease using windshield-wiper motions, and a deeper shade in the outer corner for depth. Press a shimmer shade on the center of the lid and inner corner. Blend all edges in small circular motions. For mascara, curl lashes first (hold 10 seconds at base), then wiggle the wand at the base and sweep upward. Wait 30 seconds between coats. Lower lashes benefit from a smaller wand. GlowMart offers 12-shade palettes, single shadows for custom building, and eyeshadow duos for travel.

Lip Techniques

Exfoliate lips before lipstick for a smooth finish. Use a lip liner matching your lipstick to define the lip line and prevent feathering. Start from the cupid's bow, draw to the corners, then line the bottom lip. Fill in the entire

lip with liner as a base for longest-lasting color. Apply lipstick from the center outward. For matte looks, apply a thin layer and let it set for 60 seconds. For glossy finish, layer lip gloss over a satin lip color. Tinted lip balm provides subtle color with hydration for everyday wear. Lip stains provide a natural flush lasting 6-8 hours.

Blush, Bronzer, and Contour

Apply blush to the apples of your cheeks, blending upward toward the temples. Powder blush works best over powder foundation; cream blush pairs well with liquid or dewy foundation. For bronzer, apply in a 3-shape from forehead hairline to cheekbone hollow to jawline. Use a large, fluffy brush and build gradually. Bronzer should be 1-2 shades darker than your skin. Contour uses cooler-toned shadows to create structure: apply to the hollows of cheeks, sides of nose, and under jawline. Highlight the high points: cheekbones, bridge of nose, brow bone, and cupid's bow.

Setting Your Makeup

After completing all cream and liquid products, dust translucent setting powder on the T-zone. For under-eye concealer, press powder gently with a small brush. Apply setting spray as the final step, holding 8-10 inches from your face. Mist in an X then T pattern. For extra staying power in hot weather, sandwich your makeup: spray primer, apply makeup, then spray again. GlowMart carries mattifying sprays (12-hour wear), hydrating sprays (add dewiness), and illuminating sprays (subtle glow finish).

Day to Night Transition

You do not need to start from scratch for an evening look. Intensify the eyes by adding a darker shade to the outer corner, apply metallic or glitter shadow to the center lid, and add liquid eyeliner along the upper lash line. Thicken mascara with an additional coat. Deepen your lip by switching from nude to berry, wine, or red. Add intense highlight to cheekbones and inner eye corners. Touch up your base by pressing a damp sponge over any settled areas. A setting spray mist refreshes the entire look.

Tool Care and Hygiene

Dirty tools harbor bacteria causing breakouts and eye infections. Spot-clean brushes after each use with brush cleaning spray. Deep-clean all brushes weekly with brush shampoo: wet bristles, swirl in shampoo, rinse until water runs clear, reshape, and lay flat to dry. Never dry brushes standing upright as water loosens the glue. Replace beauty sponges every 1-3 months. Replace mascara every 3 months. Sharpen pencils before each use. Never share eye makeup. Clean eyelash curlers with rubbing alcohol after each use.
